

Maryland-based technology company delivering innovative, scalable, and secure **solutions to federal and commercial clients**. Combining deep technical expertise with a mission-focused approach, we help organizations solve complex challenges, improve performance, and achieve measurable results through innovation, agility, and knowledge sharing.

→ Cybersecurity

- External and internal threat mitigation
- Identification and handling of risk assessment and risk management
- Utilization of a comprehensive cybersecurity stack
- Integration of cutting-edge tools, technologies, and systems
- Expertise in safeguarding against cyber threats that includes:
 - Zero Trust Security Model
 - Forensic Analysis and Discovery
 - Identity and Access Management
 - SOC 1 & 2 Audit
 - Intrusion Detection
 - Authentication and Authorization
 - Data Loss Prevention
 - Cybersecurity as a Service

→ Business Intelligence

- Intelligent business decisions from diverse data sources
- Data analytics applications with scientific algorithms for Big Data
- AI and ML powered optimized BI solutions

→ Mobile Application Development

- Enterprise-level initiative to make applications on mobile platforms
- Cross-platform mobile application services (iOS and Android)
- Custom mobile application development.

→ Software Engineering and SDLC Automation

- Online artifact production and collaboration
- Efficiency and timesaving through automated processes
- Automation for requirement management, traceability matrix, and risk

→ Financial Systems Management

- Design, implement, maintain and secure financial systems platforms
- Systems Audit for Financial Compliance
- Supports the largest financial institution in the world - IRS

Certifications

SPARK — Strategic Program for Advanced Research & Knowledge — Future Proofs Our Customer's Technology Path Forward

- Alignment of technical solutions with customer requirements;
- Investment in fully developed laboratory environments;
- Advance capabilities in technologies like **zero trust, blockchain, AI, and ML**;
- **Cybersecurity center of excellence (CCoE)** to detect and remediate external and internal threats;
- Simulation of customer environment to **test before investing**.
